

Target 1: We will implement our ‘Principles for Avoidable Air Travel’ to guide GTO-staff in reducing CO₂-emissions from business travel.

By 2026 we will track all our air travel CO₂-emissions, include budgets to offset emissions into project proposals and offset flights where project budgets allow.

Target 2:

2.1. We will mainstream environmental and climate impact considerations across our three key areas — School Sanitation, WASH Capacity Development, and WASH Policy and across all our programmes by 2027.

2.2 We are committed to consistently addressing climate change with our target groups by raising awareness of environmentally sound and climate-resilient approaches through our workshops, training sessions, e-learning courses, advocacy work and education. In this way, we are contributing to improving environmental conditions and mitigating climate change.

By 2027, all our workshops, training sessions and e-learning courses for WASH experts will address climate change, climate-resilient and environmentally sound approaches.

By 2027, all our advocacy programmes will include climate and environmental advocacy messages.
