Environment  
Charter

# Greening Humanitarian Assistance Donor Priorities and Practical Guidance

26th June 2025 / 15h-17h CEST

# Welcome and Agenda

## Part 1:

- Launch of the Common Donor Greening Priority Actions
- Donor Interventions
- Launch of the Environmental Sustainability Guidance
- Q&A

## Part 2:

- Unpacking the Priority Actions
- Case Studies, tools and guidance from Organizations
- Q&A

**Donor Greening  
Working Group**

# Introduction to the Common Donor Greening Priority Actions

Scan me!

# Introduction to the Common Donor Greening Priority Actions: Why does Greening matter for the Sector?

Climate change is driving more severe and frequent emergencies, undermining livelihoods, and serving as a catalyst for conflict and migration. **Greening**....

- Increases operational efficiency & reduces costs (e.g. solar power, reduced air travel, joint warehousing and transport).
- Protects natural resources – conserves livelihoods and supports stability in fragile settings.
- Enhances localisation & resilience: building local capacity, stimulating sustainable markets and empowering communities to recover and thrive.
- Environmentally responsible hum. assistance reduces pollution, prevents disease, e.g. through cleaner energy and cooking solutions.

# Introduction to the Common Donor Greening Priority Actions: What are the Actions intended to be?

- Developed by Donor Greening Group to enhance coordination & drive collective action on greening.
- Aligned with Commitments 3 & 4 of Donor Declaration and reflect shared ambitions for greening.
- Designed to deliver climate and environmental outcomes while supporting humanitarian effectiveness.
- Build on momentum from ECHO's Min. Env. Requirements, Donor Declaration & support for Charter
- Clear, unified message from donors to partners - promote coherence and avoid contradiction
- Non-exhaustive - key actions donors agree to promote.

# A quick peek at the Priority Actions

**Environmental assessments**

**Greener products & services**

**Travel & transport emissions**

**Sustainable waste mgmt.**

**Single-use plastics**

**Water exploitation & wastewater mgmt.**

**Water trucking**

**Clean cooking**

**Fossil fuel generators**

**Sustainable food**

# Donor Interventions

## **Spanish Agency for International Development Cooperation/AECID**

*Mrs. Lucía Prieto Ríos, Humanitarian Director*

## **Directorate General for European Civil Protection and Humanitarian Aid Operations /DG ECHO**

*Mr. Frederik Schutyser, Deputy Head of Unit, Humanitarian Aid Thematic Policies*

## **Crisis and Support Centre/CDCS**

*Mr. Pierre Salignon - Head of the Humanitarian and Stabilisation Operations Centre*

## **Swiss Agency for Development and Cooperation/SDC**

*Mr. Silvio Flückiger - Deputy Head of Humanitarian Aid and Head of Operation*

## **German Federal Foreign Office/GFFO**

*Mr. Helge Holleck - Deputy Head of Division - Humanitarian Assistance and International Disaster Response*

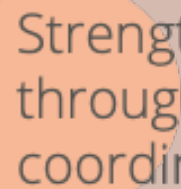

# Priorities to Action: Aims of the Charter Secretariat

Connect signatories to experts and resources within and beyond the Charter network to access **technical guidance** in implementing Charter commitments.

Serve as a **knowledge-sharing** platform to share Charter-related resources, collaborate in developing knowledge products, and exchange lessons learned and best practices from the Charter community.

Strengthen **communications and engagement** with Charter signatories through developing and enhancing platforms for partnership, learning, and coordination.

**Promote, disseminate, and advocate** for the Charter, and the implementation of its commitments, within the humanitarian community.

# Expertise for Climate and Environmental Action

# Secretariat Guidance Pages

## Objective

This platform aims to serve as a dynamic resource, providing easy access to tools, expertise, and case studies that help organizations integrate climate and environmental considerations into their programming

## Thematic Pages

- [Disaster Risk Reduction \(online\)](#)
- [Environmental Sustainability \(online\)](#)
- Local and Indigenous Knowledge (coming soon)
- Nature-based Solutions (coming soon)
- Climate Science and Risk
- Preparedness, Early Warning, Anticipatory Action
- Climate Change Adaptation
- Cluster-level Guidance

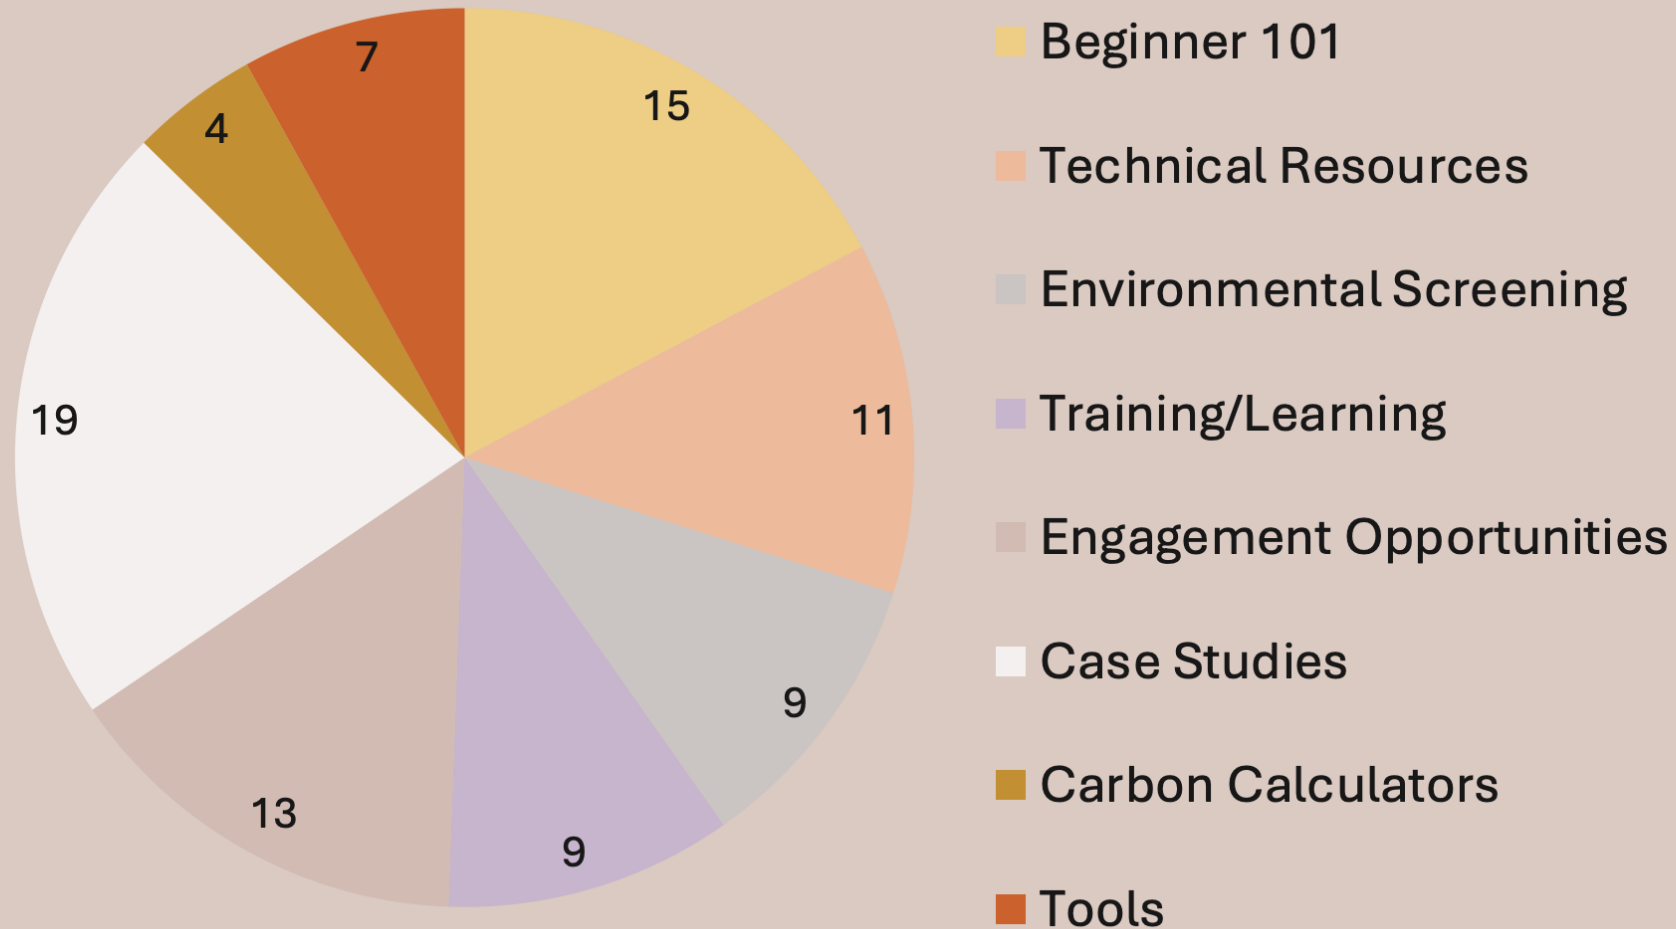

## Roll Out Plan

- Guidance Page released every two months
- Accompanied by a webinar
- Shared via the Charter newsletter

On-going access to resources through secretariat referral hub

# Environmentally Sustainable Humanitarian Action

Languages:  
English - 87  
French - 32  
Spanish - 19  
Arabic - 4

# Example 1: Getting Started IFRC Green Response

## Getting Started

Introductory resources and foundational frameworks for integrating environmental considerations into humanitarian work.

**IFRC Green Response:** [Environmental Quick Guide](#), [Green Logistics Guide](#), and [Environmental Policy Toolkit](#):

- **The Green Logistics Guide** provides advice and practical tips on how to improve the environmental sustainability of National Societies' and the IFRC's logistics and supply functions. The guide covers a range of subjects, all aimed at reducing carbon emissions, reducing waste, or reducing our environmental footprint in other ways. There are examples from across the International Red Cross and Red Crescent Movement, and references to find further guidance (English, [French](#), [Spanish](#), and [Arabic](#))
- **The Green Response: Environmental Quick Guide** explains the concepts of green response and provides practical advice on how National Societies and partners can improve the environmental sustainability of their work and of their organizations as a whole. It includes examples of how different National Societies have 'greened' their operations to provide ideas and inspiration for others looking to improve their environmental impact (English, [Spanish](#), [French](#), and [Arabic](#)).
- **Environmental Policy Toolkit:** This toolkit was designed to help organisations (like Red Cross Red Crescent National societies) to develop their own Environmental Policy. It includes a model policy template, and detailed guidance notes to help decide on the level and detail of environmental commitments your organisation wants to make. (English, [French](#), [Spanish](#), Arabic)

**Languages:** English, Spanish, French, and Arabic

**Access:** Free

# Example 2: Toolkits

## Climate Action Accelerator Toolkits

### Toolkits for adapting programs, policies, and operations

Practical tools and templates to support environmental action in programming and organizational strategy

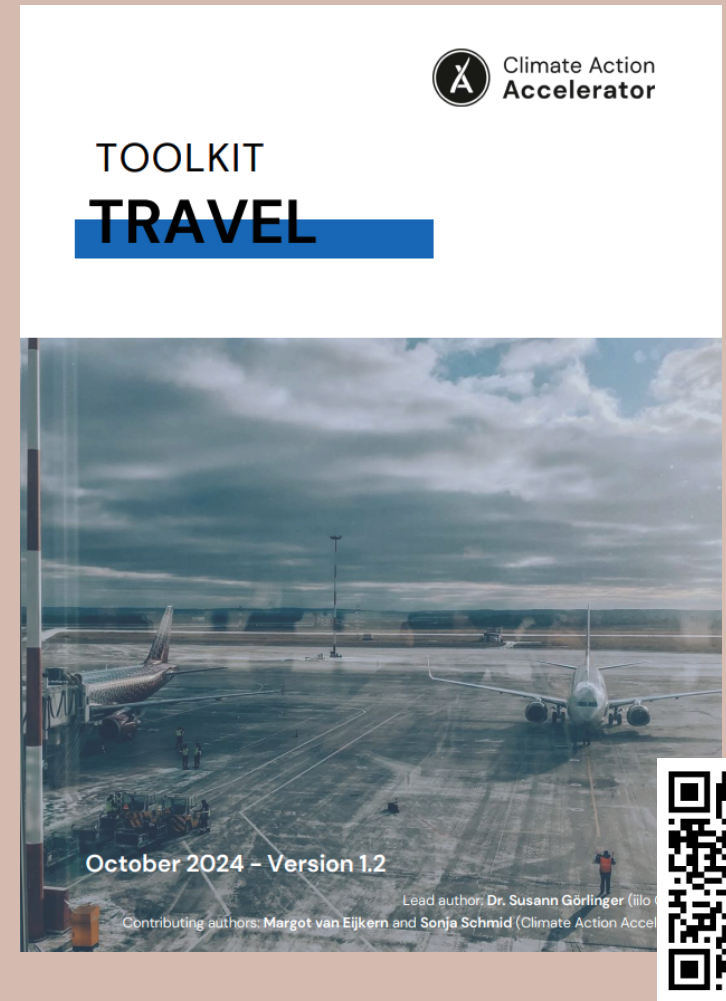

#### Climate Action Accelerator Toolkits

The purpose of the Climate Action Accelerator toolkits is to equip organisations with a set of resources and strategies to adapt ways of working, policies and procedures in key operational areas to reduce their climate and environmental footprint. The toolkits are designed to provide environmental coordinators and decision-makers with hands-on advice, often in the form of a step-by-step process, along with a suite of practical tools to support the implementation of climate and environmental roadmaps.

- **Procurement Toolkit:** provides a step-by-step guide for adapting procurement processes with a view to reducing the climate and environmental impact of goods and services and guidance on procurement criteria across different categories.
- **Fleet Toolkit:** combines existing resources from the Fleet Forum with newly developed tools to support organisations in taking stock of their existing fleet and fleet-related emissions, as well as to reduce the climate and environmental impact of their fleet.
- **Travel Toolkit:** guides users through a step-by-step process on the journey to reduce professional travel, notably air travel.
- **Good Office Practices:** offers a a step-by-step process on how to implement good office practices and a list of solutions related to environmental office practices.
- **Solarisation Toolkit:** provides a step-by-step guide to solarising buildings with a particular focus on two types of settings: International humanitarian field projects and health structures in low- and middle-income countries.

**Languages:** English and French

**Access:** Free

# Example 3: Learning Opportunities

## Webinar: Mitigating the Environmental Impacts of CVA

### Training, Webinars, and Courses

Opportunities for learning and training on environmental sustainability

---

#### **CALP Network: CVA, Climate & Environment Community of Practice: A greener response?**

This webinar focused on mitigation of the impacts of cash and voucher assistance on the climate and environment. It featured different perspectives on greening humanitarian action and measuring the environmental footprint of CVA, including research analysing the carbon footprint of MEBs.

**Language:** English

**Access:** Free

---

# Example 4: Engagement Opportunities WREC Coalition Coordination Groups

## Engagement Opportunities and Partner Newsletters

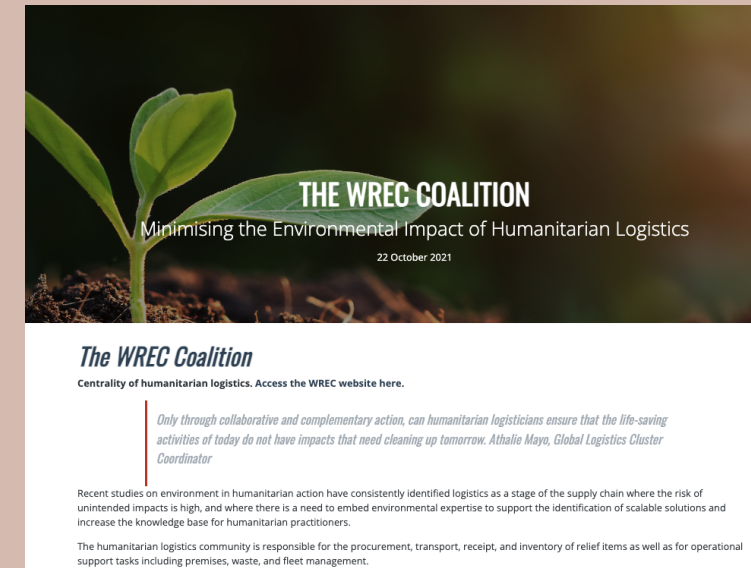

Working groups, networks, communities of practice, and knowledge sharing

### WREC Coalition Coordination Groups

The WREC coalition is multi-stakeholder initiative led by the Logistics Cluster to support partners with operationalizing sustainability across humanitarian logistics. The WREC's work spans from field-level technical support to global coordination, providing real-time, operational sustainability solutions where they are needed most. The WREC coalition hosts several coordination groups on thematic issues related to sustainable supply chains, including:

- Decarbonisation Coordination Group
- Green Procurement Coordination Group
- Reverse Logistics Coordination Group
- Circular Economy Coordination Group
- Waste Management Coordination Group

Access: Anyone who is working in the humanitarian sector and is interested in joining the coordination groups is welcome. Join the various coordination groups by emailing the WREC Coalition Helpdesk ([global.wrec@wfp.org](mailto:global.wrec@wfp.org))

# Example 5: Carbon Calculators

## HCC+

### Carbon Calculators

Tools to measure and manage greenhouse gas emissions in humanitarian contexts

---

#### Humanitarian Carbon Calculator (HCC)

The HCC, developed through an interagency effort, allows organizations to assess the direct and indirect greenhouse gas emissions associated with their activities. This in turn makes it possible to set reduction targets and to build emission reduction plans. The Humanitarian Carbon Calculator can also be used to monitor the evolution of an organization's emissions over time, thereby assessing the effectiveness of efforts to reduce emissions. Read the **Methodological guide** to help you get started or see the **HCC website** for video tutorials and more information.

**Languages:** English, **Spanish**, and **French**

**Access:** Free

# And so many case studies...

**Case Studies:  
Sustainable  
Supply Chains  
and Waste  
Management**

**Case Studies:  
Decarbonization  
and Clean Energy**

**Case Studies:  
Environmental  
Policies and  
Operations**

## Case Studies: Sustainable Supply Chains and Waste Management

Real-world examples of environmental good practice across supply chains

# Q&A

# Unpacking the Priority Actions

## Overview of Priority Actions

- Ms. Fiona Cook, **Donor Greening Group (DGG) Facilitation Team**

## Case Studies, Tools and Guidance:

### Priority Action 2:

- **Ms. Katherine Ely**, Project Manager, **WREC Coalition**
- **Mr. Arifur Rahman**, Manager, Logistics and Procurement, **IFRC Bangladesh Delegation**

### Priority Action 3:

- **Ms. Samantha Brangeon**, **DGG Facilitation Team**
- **Ms. Rose van Steijn**, Development Director, **Fleet Forum**

### Priority Action 10:

- **Ms. Natasha Westheimer**, **Charter Secretariat**
- **Ms. Madhumitha Madhavan**, Regional Technical Coordinator – Climate & Environment, **ACTED**

# Overview of the 10 Priority Actions (1-5)

1. Conduct environmental assessments of planned interventions and integrate mitigation measures.

1. Prioritise products and services with a proven lower climate and environmental footprint.

1. Implement measures to significantly minimise GHG emissions from travel and transport.

1. Incorporate environmentally sustainable waste management.

1. Phase out single-use plastics except where this would compromise the delivery of humanitarian assistance.

# Overview of the 10 Priority Actions (6-10)

6. Avoid overexploitation and pollution of water resources and support proper wastewater management.

7. Avoid water trucking except as a last resort. If used, include a strategy to phase it out.

8. Phase out the use of fossil fuel generators where possible, reduce energy consumption and transition to renewable energy.

9. Facilitate access to sustainable and clean cooking solutions and services.

10. Support access to sustainably produced food, preferably locally produced.

# Donor Endorsement of the Priority Actions

## European Civil Protection and Humanitarian Aid Operations

Home > ... > What we do > Humanitarian aid > Climate change and environment > Humanitarian aid donors' declaration on climate and environment

## Humanitarian aid donors' declaration on climate and environment

## Donor endorsement to date

European Commission (DG ECHO); France (CDCS); Germany (GFFO); Spain (AECID); Switzerland (SDC).

**Donor Greening  
Working Group**

**Priority Action 2:  
Prioritise products and services  
with a proven lower  
climate and environmental footprint**

# ENVIRONMENTAL SUSTAINABILITY IN HUMANITARIAN LOGISTICS

Enabling humanitarian logistics partners to reduce their impact on the environment

## WREC Coalition

### Linking People & Planet: Supporting Supply Chain Practitioners with Impact Reduction

June 2025

Save the Children

# The Logistics Cluster WREC Coalition Vision & Goals

## Coalition Vision

**By 2030**, the humanitarian supply chain community will be aware of the sector's environmental impact & are empowered to independently implement a coordinated, scalable, & sustainable approach to measure & reduce that impact.

01

**Focus** on greenhouse gas emissions & waste: **Do No Harm**

02

**Increase** knowledge and awareness in the community: **Enable**

03

**Support** practitioners with impact reduction solutions: **Expertise**

# The Impact of Supply Chain

The humanitarian sector is responsible for ca. **35.3 MtCO<sub>2</sub>e** (Mega tons of carbon dioxide equivalent).

This is more than the **UK's National Health Service (NHS)** and similar to a **large city**.

For most humanitarian organisations:

Well over **80% comes from their supply chain** (purchased goods and services, freight, storage, distribution, etc.).

40 – 60%, from **purchased goods and services** alone

**Energy** remains important: The sector spends **over US\$100 million/year** on over **15,000 diesel generators**, resulting in just 6 major humanitarian agencies jointly emitting ca 194,000 tCO<sub>2</sub>.

- [Climate Action Accelerator Roadmap for halving emissions in the humanitarian sector by 2030](#)
- Global Platform for Action HNPW session & workshops

# International vs. Local Procurement

## Is local always more sustainable?

# Action Makes a Difference

## Capacity Strengthening

For suppliers & humanitarian teams

Goes beyond procurement teams

Market Assessments are the first step

Supplier engagement

## Selecting Products & Services

Costs matter, so does quality  
(Total cost of ownership; RoI)

Selection of suppliers with environmental plans

Weighting criteria for sustainable practices or products

THANK YOU!

**Global.WREC@wfp.org**

# BANGLADESH PILOT

## GREEN PROCUREMENT MARKET ASSESSMENT

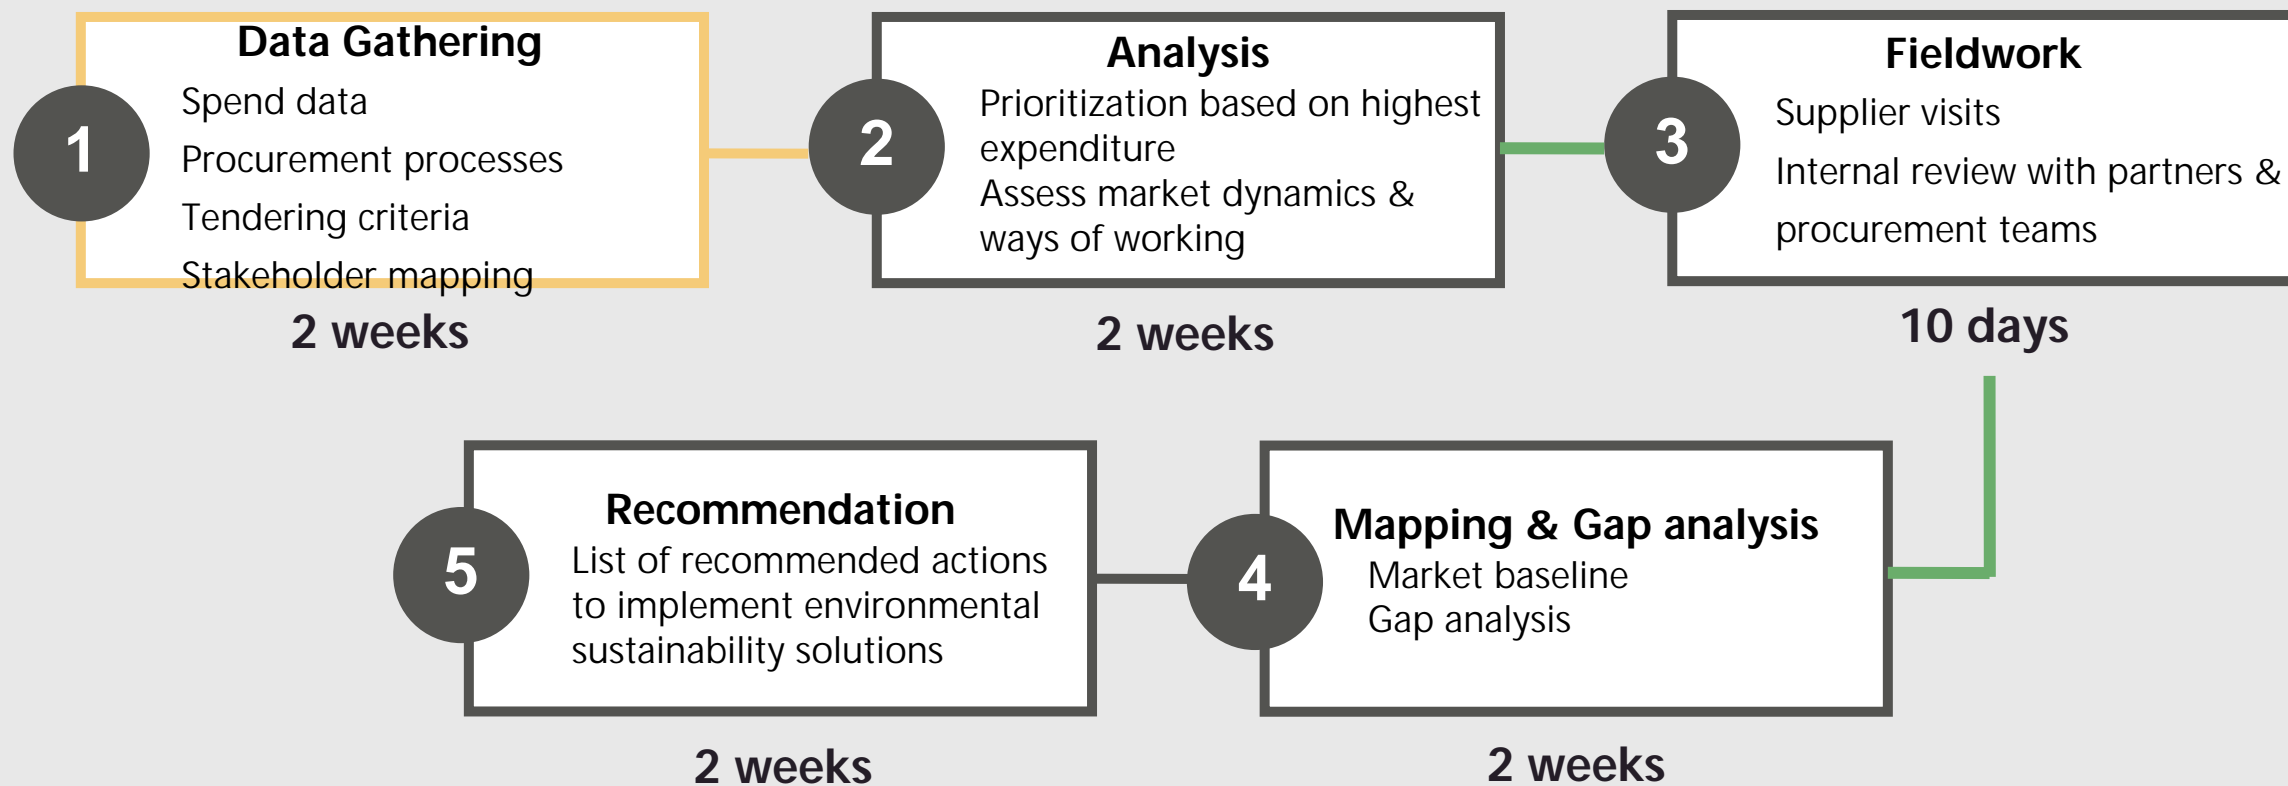

WREC  
IFRC BANGLADESH  
BDRCS

---

26 June 2025

# Green procurement market assessment process

**Low Supplier Awareness on Sustainability–**

*Most suppliers lack environmental policies and understanding of green practices.*

**Widespread Use of Non-Recyclable Materials–**

*Single-use plastics, melamine items, and laminated packaging are common.*

**High Use of Non-Recyclable Materials–**

*Melamine products, plastic-lined jute bags, laminated boxes widely used.*

**Hazardous Medical Waste Concerns**

*Plastic from test kits may be recyclable but classified as hazardous.*

**Environmental Impact of Bamboo**

*Untreated wastewater and unmanaged transport emissions.*

# Key recommendations

## Raise awareness & develop knowledge

**Internal training to be mandatory**

**Encourage suppliers to attend training**

## Policies & SOP's

**Incorporate environmental needs in procurement processes**

**Implement a supplier sustainability policy**

**Include environmental sustainability tendering criteria**

## Decarbonization plans & targets

**Gain management buy-in**

**Set organizational targets**

**Establish action plans with suppliers**

# Key recommendations

## Advocacy & Collaboration

**Cross-sector collaboration to standardize environmental requirements**

**Collaborate with suppliers to identify solutions**

## Optimization

**Improve coordination between program and logistics teams**

**Identify optimization opportunities with suppliers**

## Waste Management

**Reduce and eliminate unnecessary materials & packaging**

**Suppliers to review and improve their waste management practices**

# Initiative Implemented

Institutionalized  
Sustainable Procurement

Procurement Awareness  
Training

Supplier Engagement

Minimal Plastic Mandate

Mandatory Eco-  
Regulations for  
Construction Tenders

Paperless Digital  
Transition

# Planned Initiatives

# Challenges

**Limited Awareness**

**Lack of Resource across the sector**

**Lack of coordination**

**Short Term Cost Focus**

**Budget Constraint**

THANK YOU!

WE'RE EXCITED ABOUT WHAT THE  
FUTURE HOLDS, TOGETHER!

January 2024

# Priority Action 3. Implement measures to significantly minimise GHG from travel and transport.

- **Travel and transport are essential** to delivering humanitarian aid, but further efforts required to reduce our footprint.
- **Reducing air travel**
  - **A low-hanging fruit**, given that organisations and donor agencies have direct control over their travel policies and associated emissions.
  - Co-benefits in terms of **reducing costs** : for example, promoting online participation, limiting international air travel to essential trips and reducing the use of business and first-class flight)
  - Co-benefits in terms of **promoting the localisation agenda** : for example, increasing the use of local and regional expertise and staff

## Priority Action 3. Implement measures to significantly minimise GHG from travel and transport.

- Interesting practices from the sector with regards **to joint cargo transport** and **switching from air to sea freight**, and **pre-positioning** to reduce need for air transport of goods when emergency hits
- **Efforts to rightsize fleet** (the right vehicle for the right journey) and **pool fleet** have also proven successful

## Greening Humanitarian Assistance

Implement measures to significantly minimise greenhouse gas emissions from travel and transport.

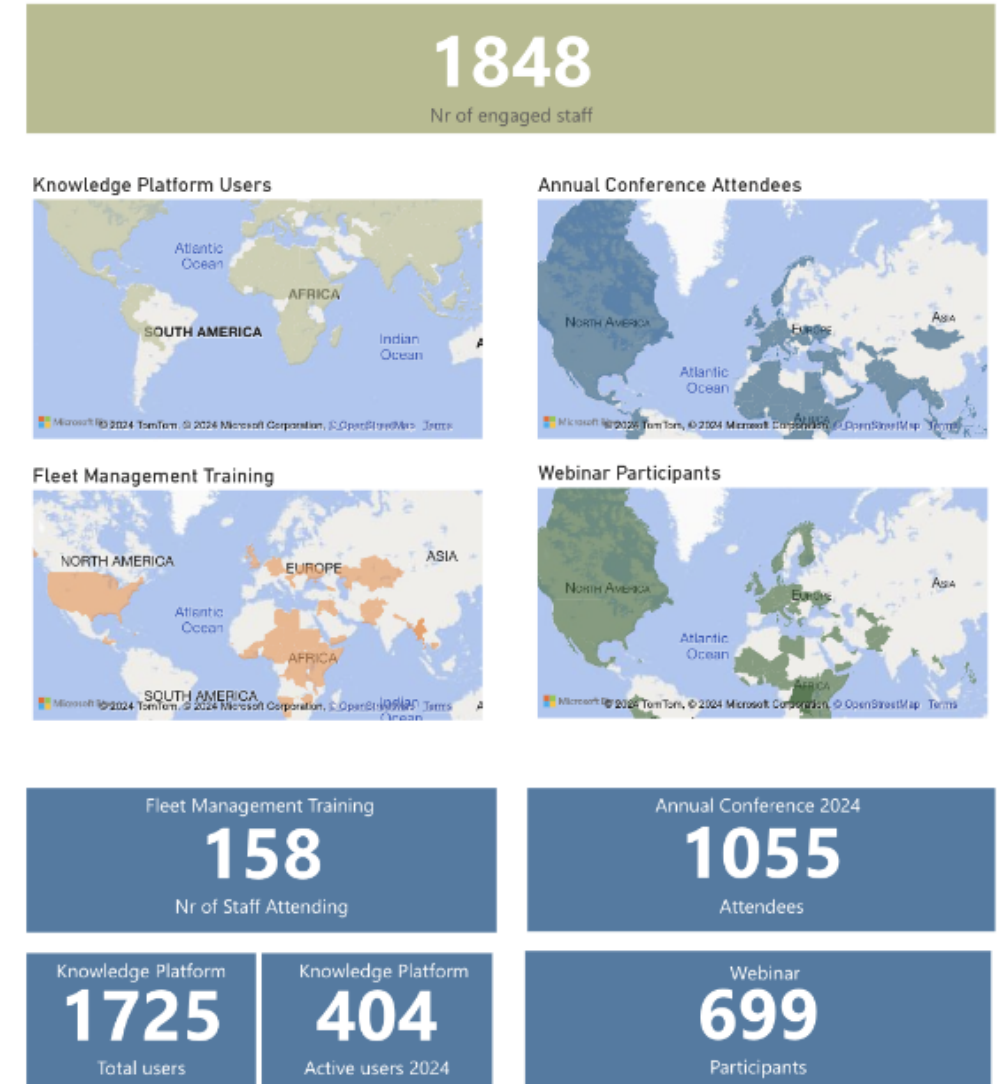

# Who is Fleet Forum?

## Sustainable Transport for a Better World

- Swiss, not-for-profit membership association
- Inspiring better, cleaner, safer and more effective transport around the world
- We are enablers
- We bring together key players in the aid and development and commercial transport sectors.
- We facilitate knowledge and experience sharing
- We develop programmes to realise better fleet and mobility management

In 2024 we worked together with Fleet Managers all over the world

### **Baseline and targets**

Set a baseline and set targets for the largest fleets in our organisation, representing at least 50% of your global fleet, by end of Q3 2024

### **Leading indicators / objectives**

- Within 5 years 25% of vehicles of our organisation are Euro3 or higher;
- Within 3 years our organisation participates in vehicle sharing initiatives in at least 20% of the operating countries.

### **The Commitments**

# ESAT: Assess and improve environmental fleet and transport performance at any level

Meets: Priority Action 1: Conduct environmental assessments of planned interventions and integrate mitigation measures.

## Why?

- To support organisations in meeting DG ECHO's MERR
- To assess organisation's approach to transport and fleet management from an environmental sustainability perspective

<https://www.fleetforum.org/esat>

## Performance per Category

Avg. Overall  
Score

**48%**

My organisation's  
performance per  
category in comparison  
with other organisations

 **55%**

Management &  
Monitoring

 **42%**

Planning &  
Procurement

 **38%**

Waste &  
Maintenance

 **44%**

People Management

# Vehicle & Ridesharing between (I)NGOs: An effective way to reduce emissions and costs

## Why?

- Sharing of transport assets reduces emissions, costs and road safety risks

## Where?

- Lebanon, Nigeria, CAR, Syria

## How?

- By joining, learning, failing, adapting and learning again.
- And download our toolkit

## Who?

- Organisations who show leadership and make key policies decision all down/up the management line to ensure 'organisations make it happen

Meets: Priority Action 3: Implement measures to significantly minimise greenhouse gas emissions from travel and transport

**SHARE THE RIDE**  
to improve Lebanon's environmental status

**Routes:**

Beirut → Zahle (→ Baalbeck) → Beirut  
Beirut → Tripoli (→ Akkar) → Beirut  
Beirut → Tyre (→ Nabatieh) → Beirut

**Meeting Points:**

Beirut → [Sodeco Square](#)  
Zahle → [Homecuisine.lb](#)  
Tripoli → [Mashroo3 ahwe](#)

**Departure: 8.00 AM**  
**Return: 3.00 PM**

[Click to view the video](#)

It makes me feel less guilty to do so many movements per week

Parking available at all meeting points

**Benefits:**

- Air quality improvement (less tailpipe emissions)
- Environmental footprint reduction
- Collaboration between departments / agencies
- Operational costs reduction

**Safety & Security:**

- MoU and SOP signed between participating agencies
- Contracted / trained drivers
- Full coverage insurance
- Movement tracking / speed limit

**Our Donors:**

**Current Participants:**

**How to join?**

1. Start planning your days at destination according to departure times
2. Ask explicitly your fleet manager to allocate your movements to ride-sharing
3. Don't be late, the vehicles leave on time | Bring your organisation's ID card

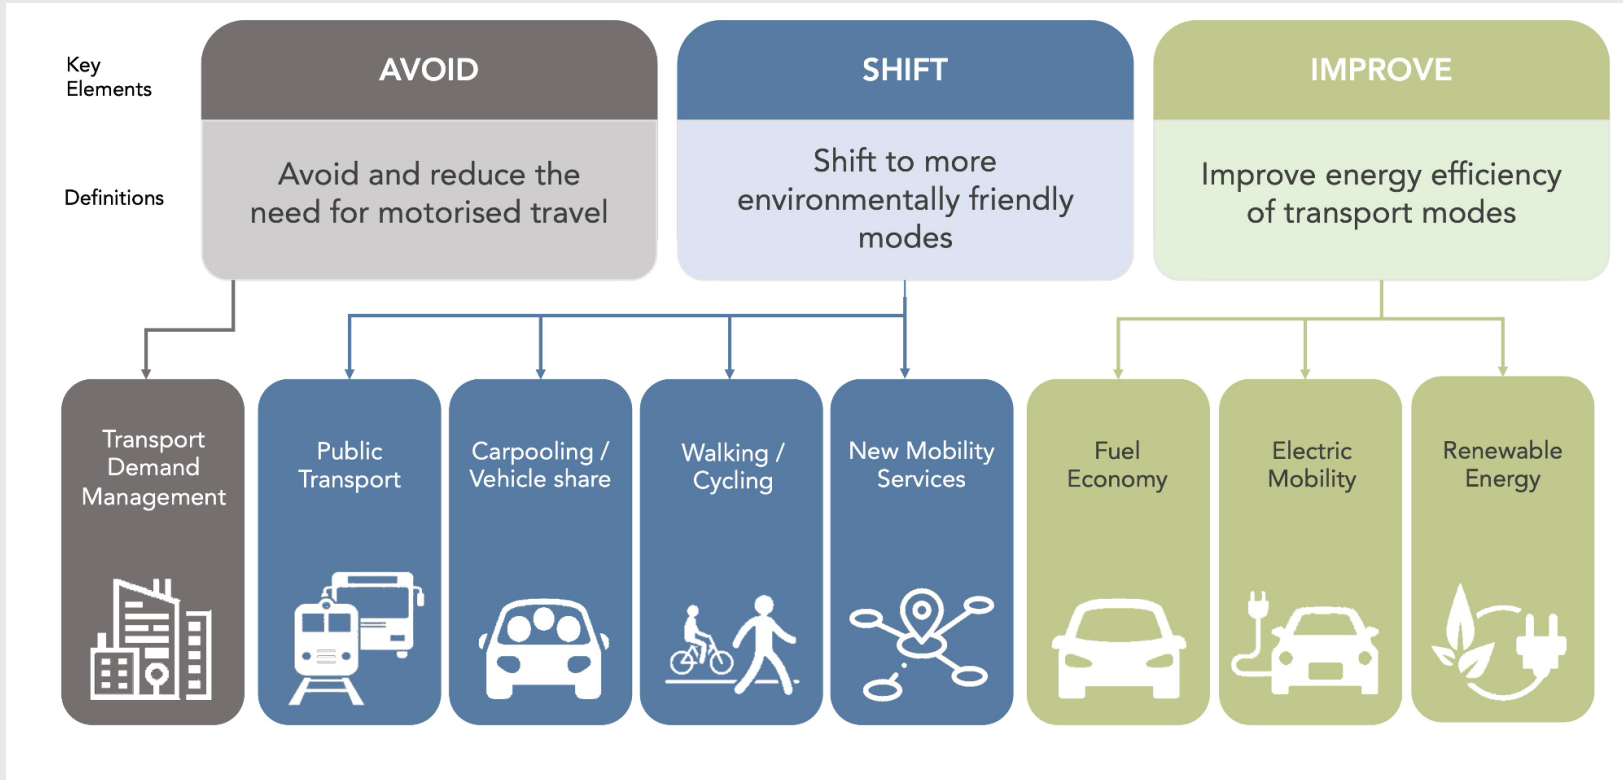

# In Lebanon we learned a valuable lesson: Vehicle sharing requires a systemic change

- Transform the commitment to ecological transition into practical action;
- Support positive societal change by embedding it into organisational models and the way the humanitarian community operates;
- Lead by example to challenge the idea of individual mobility as the norm and encourage positive shifts in social behaviour;
- Move past the fear of administrative risks by embracing shared resources and trusting in the power of collective action

[Download the full report](#)

# EVs are not THE solution to reducing your travel and transport emissions, A-S-I is!

Download [here](#)

## How can the donor community support organisations to reduce emissions from travel?

- Encourage organisations to submit ESAT with their donor funding applications
- Fund 'vehicle and ride sharing between organisations' and make it a condition that individual fleet sizes reduce as an outcome of these projects
- Actively apply the A-S-I method when reviewing and evaluating project proposals
- Take away the excuse 'the donor won't allow it' by encouraging organisations to be able to change the status quo.

***Remember: The cleanest kilometre is the kilometre not driven***

---

THANK YOU!

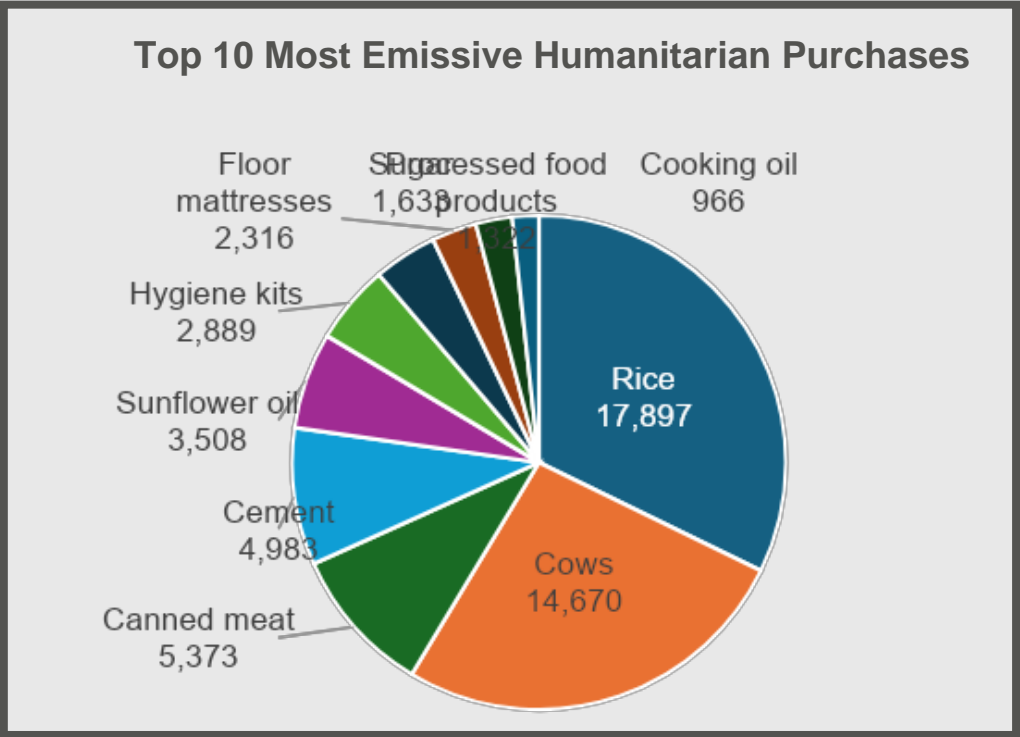

# Priority Action 10: Support access to sustainably produced food, preferably locally produced.

- **Key figures**
  - Food security and agricultural projects and programmes represent approx. **50% of the sector's emissions**
  - LCAs show majority of emissions come from **production phase** (raw material extraction and manufacturing) **rather than transport**. These are energy-intensive processes, particularly for items like shelter materials (steel, plastic, cement), medical supplies, and packaged goods.
- Food distribution & supporting sustainable food production are **2 sides of the same coin**.
- Links with Priority Action 2 : We need to procure **low carbon/certified food produce** (e.g. RSPO Palm Oil, Sustainable Rice Platform) noting that sustainable alternatives are not available for all products
- Quick win: better planning, improvement of packaging, storage/warehouse conditions **to avoid food wastage**
- **Synergies with food security projects**; supporting local farmers and producers to improve their agriculture practices

# 2024 Carbon Footprint Results

Acted’s Carbon Footprint largely driven by humanitarian assistance (in-kind, voucher, cash)

Categories	2024
Purchased goods and services	75,197
Energy	9,333
Travels	5,416

Top 10 Most Emissive Countries	Tons of CO2 equivalent	Purchase drivers
Syria	27,504	Rice, canned meat, sugar...
Niger	15,632	Livestock
DRC	14,017	Rice
Afghanistan	11,884	Cement
Ukraine	5,134	Hygiene kits, construction, bottled water
Myanmar	2,646	Floor mattresses
Somalia	2,416	Processed food, hygiene kits
Burkina Faso	2,079	Mineral, polyester, metals
South Sudan	2,020	Hygiene kits
Yemen	1,744	Floor mattresses, construction, hygiene kits

# 27K T CO2 emissions equivalent

**20,300.89 tCO2**

Emissions from food vouchers  
and cash

**Rice, Canned Meat,  
Sunflower Oil, Sugar, Wheat,  
Lentils, Pasta, Beans, Canned  
Vegetables, Grains (cereals)**

Key contents of Food  
Support

## Massive CO<sub>2</sub> Emissions Impact Our Planet

**27,000 tons of CO<sub>2</sub>** is  
equivalent to significant  
emissions from everyday  
activities.

**Flights**   
**5,000** round-trip  
flights (Asia to  
France)

**Cars**   
**5,870** cars in  
one year

**Trees**   
**1.23 million**  
trees to offset  
in a year

**Household  
Energy Use**   
**54,000** average  
African households (5  
pax per household)
